

NICHOLAS STANLEY

IT Security Architect | Vulnerability Management | GRC & Compliance
(636) 209-8799 | njstanley08@gmail.com | nicholasstanley.netlify.app | github.com/Jabeezy

PROFESSIONAL SUMMARY

Cybersecurity engineer with 8 years of technical experience and a track record of delivering measurable security outcomes at enterprise scale. Reduced a 2,000+ CVE backlog by 80% in 90 days at an FDIC-regulated financial institution through strategic prioritization, automation, and cross-functional coordination. Founded SecureEndpoint, a GRC/compliance SaaS platform for financial institutions, demonstrating hands-on security architecture design from concept through production. Deep working knowledge of NIST CSF, CIS Controls, and regulatory compliance frameworks. Experienced applying Zero Trust principles and cryptographic security architecture in production systems. Effective communicator who translates complex security risk into actionable guidance for technical and executive stakeholders alike.

CORE COMPETENCIES

Vulnerability Management: Qualys, KACE, CVE triage and prioritization, CISA KEV integration, automated remediation workflows, executive risk reporting

Security Architecture: Zero Trust design, network security controls, access management, endpoint protection, security policy development

Compliance Frameworks: NIST CSF, CIS Controls, FDIC regulatory standards, PCI-DSS adjacent, GRC program design, SOP development

Cryptographic Security: Zero-knowledge architecture, Web Crypto API, ECDH, AES-GCM, secure key exchange design

Engineering Stack: PowerShell, Python, React, TypeScript, Node.js, PostgreSQL, REST API design, CI/CD pipelines

Soft Skills: Executive-level reporting, cross-functional stakeholder collaboration, technical documentation, security awareness program development

PROFESSIONAL EXPERIENCE

Vulnerability Remediation Engineer | **Apple Bank (Contract)** Aug 2025 – Nov 2025

- Reduced a 2,000+ CVE backlog by 80% in 90 days at an FDIC-regulated financial institution, delivering one of the most significant improvements in the organization's security posture in recent history.
- Designed and implemented automated triage workflows integrating Qualys scan outputs with KACE patch management, eliminating manual handoffs and reducing mean time to remediation by approximately 60%.
- Conducted risk-based prioritization of vulnerabilities against NIST and CIS Controls frameworks, ensuring critical and high-severity findings were addressed ahead of audit windows and regulatory review cycles.
- Collaborated cross-functionally with IT infrastructure, desktop engineering, and compliance teams to coordinate patching across heterogeneous enterprise environments including servers, endpoints, and network devices.
- Produced executive-level vulnerability posture reports and trend analyses for senior leadership and audit stakeholders, clearly communicating risk reduction progress and outstanding exposure.
- Monitored and validated remediation outcomes against CISA Known Exploited Vulnerabilities (KEV) catalog to ensure highest-priority threats were addressed first.

Founder & Security Architect | **SecureEndpoint (SEPSEC LLC)** 2026 – Present

- Designed and built a multi-tenant GRC/compliance SaaS platform for FDIC-regulated financial institutions, translating enterprise security requirements into scalable architecture with automated compliance controls.
- Developed a PowerShell GPO-based security agent with DPAPI encryption and HMAC webhook validation, providing tamper-resistant endpoint telemetry and policy enforcement for regulated environments.
- Integrated a live CVE/CISA KEV threat intelligence feed with automated triage and routing logic, enabling real-time vulnerability prioritization aligned to active exploitation risk.

- Designed security policies, SOPs, and control documentation aligned to NIST CSF and CIS Controls, establishing a repeatable compliance framework for financial institution clients.
- Developed pricing, MSA documentation, and pilot program structure for initial client engagements with FDIC-supervised institutions.

Lead Full-Stack Developer | Free Agent Music (Warner ADA Sublabel) Mar 2018 – Present

- Sole technical owner for all web and digital infrastructure across a growing independent music label, responsible for security, availability, and compliance of all public-facing and internal systems.
- Built PHANTOM, a zero-knowledge encrypted messenger using Web Crypto API, ECDH, and AES-GCM demonstrating applied cryptographic architecture and security-first system design.
- Implemented and maintained access controls, dependency patching cadence, and secure deployment pipelines across all managed properties.
- Managed vendor relationships, third-party integrations, and data handling practices in alignment with privacy and security best practices.

KEY SECURITY PROJECTS

- **Apple Bank CVE Remediation:** Enterprise vulnerability reduction program, 2,000+ CVEs to under 400 in 90 days using Qualys, KACE, and custom automation at an FDIC-regulated institution.
- **SecureEndpoint GRC Platform:** Multi-tenant compliance SaaS with PowerShell GPO agent, CISA KEV threat feed integration, and NIST/CIS-aligned control documentation for financial institutions.
- **PHANTOM Encrypted Messenger:** Zero-knowledge messaging application using Web Crypto API, ECDH key exchange, and AES-GCM encryption. No server-side message storage; end-to-end cryptographic security by design.

EDUCATION & CERTIFICATIONS

Full Stack Development Certification — Codecademy
CompTIA Security+ — In Progress
CS50 Cybersecurity — Harvard University (Audit)
